DETAILED ACTION

Election/Restrictions

Claims 10-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 02 July 2004.

Information Disclosure Statement

The information disclosure statement filed 02 July 2004 has been placed in the application file, and the information referred to therein have been considered.

Claim Objections

Claims 19 and 20 objected to because of the following informalities: there is no antecedent for "said point" in line 5 of claim 9. Claim 20 is included for its dependence on claim 19. Appropriate correction is required.

Allowable Subject Matter

Claims 1-9 are allowable over the prior art of record.

Claims 19-20 would be allowable if claim 19 were amended to overcome the objection(s) above.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, taken alone or in combination, fails to disclose or render obvious an apparatus and method for projecting fringes that includes, a collimator in optical communication with two

Art Unit: 2877

sources, said collimator generating two substantially collimated beams of broadband radiation, a diffractive grating in optical communication with said collimator, and a lens in optical communication with said diffractive mating, wherein said lens generates two images of radiation having a spatial distribution of spectral regions (claim 1), or providing two sources of radiation separated by a distance and moving one of said sources relative to the other of said sources (claim 19), in combination with the rest of the limitations of claim.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Maxey et al. (4,298,286) discloses a measuring apparatus that includes multiple light sources to project a fringe pattern on a surface but fails to provide a diffraction grating, collimating lens or moving one light source with respect to another.

Kuchel (5,135,308) discloses a method and apparatus for non-contact measuring of object surface that includes the use of two light sources to direct light through respective gratings and lenses to produce a fringe on the surface of the object but fails to provide a collimating lens in optical communication with the two light sources.

Takamiya et al. (5,640,239) discloses an optical device and displacement information measurement apparatus that includes the use of a single light source and lens to direct collimated light through a grating to produce a fringe on the surface of an object but fails to provide two light sources or moving the light sources with respect to one another.

Art Unit: 2877

Muller (6,100,977) discloses a device and process for measuring two opposite sides of a body that includes the use of a single light source to direct a light beam through gratings to produce fringes on opposing surface of an object but fails to provide two light sources, moving one light source with respect to one another or a collimating lens.

Ex parte Quayle

This application is in condition for allowance except for the following formal matters:

See above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
